Lightweight, durable acrylic panels are an excellent alternative to glass, with a non-porous surface that resists bacterial growth and a higher impact resistance than glass. Caring for acrylic panels is easy, but there are some important things to keep in mind.

## General Information

- Panels with fabric or organic materials should only be used in low-humidity areas of the home. With constant exposure, moisture can work its way between panels and cause damage.
- The following products will degrade acrylic panels: Glass cleaners, acetone, gasoline, benzene, lacquer thinner, and chlorinated solvents.
- Squeegees, paper towels, synthetic rags, gritty cleansers and scouring pads will scratch panels.

## Basic Cleaning

- Panels should be cool to the touch before cleaning.
- For best results, use a nonabrasive, lint-free cloth in a gentle wiping motion. A soft cotton cloth, such as a diaper, is recommended.
- For light cleaning, use a soft sponge dampened with warm water and a mild detergent. Dry thoroughly with a chamois cloth.

## Treating Scratches

The manufacturer recommends using Novus polishes to treat scratches—purchase online at [novuspolish.com](http://novuspolish.com). Follow care instructions on packaging for best results, or visit the “Products” tab of the Novus website.

Other recommended cleaning products are Gel-Gloss and Protect All Shine Plus.

- Novus 1 is a good general-purpose cleaner that resists fingerprints, repels dust and helps protect against scratches. Panels should be cleaned and buffed to a shine on a regular basis for maximum protection.
- Novus 2 removes fine scratches and haziness. Make sure panels are clean and dry before beginning treatment to avoid further damage.
- Novus 3 removes most deep scratches and abrasions from acrylic panels. Final finishing requires Novus 2.

Always test products in an inconspicuous area before cleaning the entire panel, and remove all product residue with a clean, soft cloth.
